LIBRARY ASSESSMENT

Jose M. Ruiz

Mentors: Lee Jaffe and Greg Careaga
Project Goal

To conduct meaningful research on the usability of libraries.

Provide valid quantitative and qualitative findings that can be used to provide students a rich learning environment.

These findings are important because they will help us see the Library from the point of view of users.
Method

• Conduct focus and individual group interviews, descriptive observations, and “photo survey”

• There will be a list of the things we want students to photograph and then interview them about their pictures.

• By using cameras it may be more appealing to students to engage in research.
Group Study Rooms

• Our users want comfort and convenience. Library space needs to be flexible, to accommodate a number of preferences--some users need absolute quiet, others need a collaborative work environment that encourages conversation.

• Additional electronic workstations and a number of group study rooms to foster collaborative learning.
A library for the 21\textsuperscript{st} Century

State-of-the art research facility to support a new generation of library users.
